ENGINEER'S REPORT

3rd Ave & 5th Ave Reconstruction

Preliminary design continues on these projects. ADA issues are being evaluated as discussed with Council to determine if certain areas have significant challenges that would justify a waiver.

Lisbon Road Overlay

Preliminary design continues on this project as well. V&K is evaluating the cost and impacted area required to build up the south shoulder, construct a new ditch section, and perform associated clearing and grading. This option can be compared to the curb and gutter/storm sewer option to address the issues on the east end of Lisbon Road.

Bryant Park Well

The draft report for the water system is nearing completion. The report will be submitted for review shortly. Alex has indicated he would like to conduct additional evaluation of Well 7 to confirm that rehabilitation is not feasible prior to proceeding with design of a new well.

Water Plant Filter

The inspection has been coordinated with Alex for the week of January 19th. A report will be provided with recommended repairs and associated cost following the inspection.

Sewer Rehabilitation/Replacement

Work continues on the preliminary plans for the Shepley and Mehaffy sewer projects. Preliminary plans will be provided to the City for review in late January. Following review, construction permit application forms will be completed and submitted. V&K anticipates soliciting bids in March with construction to follow in late April or early May.

Wastewater Treatment Plant

V&K reviewed the draft permit and went over the requirements with Alex. A testing schedule was discussed to comply with the conditions of the permit. A comment letter will be provided to IDNR prior to the deadline to address any concerns with the draft permit.
